

8.1. PROGRAM 'KOMVALG'

At the local elections not only political parties put up lists. In most communes, in addition to the political parties, a number of so-called 'list outside the parties' are put up. They are identified, partly by a non-reserved letter, partly by a label. The labels differ much from each other. As indicated in section 8.6., for the local elections from 1970 to 1981, 245 different labels can be identified for lists outside the parties.

If every list-label should have a fixed position for every commune, the number of variables for the local elections would be enormous. On the other side, it is not satisfactory simply to aggregate all lists outside the parties in a single category. Important information will be lost.

The solution adopted here is, that it is up to the user to decide to what extent the different list-labels, including the political parties, shall be aggregated.

In the standard-version of the data-archive presented in section 2, all political parties with a reserved letter are being assigned their own position, and the lists outside the parties have been subdivided into 8 groups in accordance with the main-divisions in section 8.6.

Other solutions are possible, and in the following the 'KOMVALG'-program is described, which makes it possible to create other versions of the local elections.

The main functions of program 'KOMVALG' is to merge and aggregate two basic files, one containing general summary information for the local elections (TAPE3), another containing information for every list put up at a given local election (TAPE4). It is up to the user to determine how and to what extent the various lists should be aggregated, i.e. summed up inside defined groups. To achieve that the user must create a special file (TAPE1) and make a number of program instructions using the MODIFY line-editor.

8.2. INPUT FILES

TAPE1:

A user generated file controlling how the list-aggregations should be performed. The file consists of two variables in free-field format, i.e. two numeric variables per line separated by at least one blank character. The first variable is identical to the list-label serial number in section 8.6. It goes from 1 to 245 augmenting 1 per line. It means that TAPE1 must have 245 lines.

The second variable indicates list-aggregation number. It goes from 1 to N, where N equals total number of list-aggregations. Serial numbers having a value of 1 on the list-aggregation variable will be aggregated together in the first list group. Serial numbers having a value of 2 on the list-aggregation variable will be aggregated in the second list-group, etc The values on the list-aggregation variable can be of any order, but it is required, that all integer-values between 1 and N are used, i.e. 1 or 1,2 or 1,2,3 or 1,2,3,4, etc. At least 1 list-aggregation group must be defined on TAPE1.

The most convenient way of creating TAPE1 is to use the AUTO command in an interactive run.

Example:

```
NEW,TAPE1      (creates primary file)
AUTO,1,1      (starts line-number generator)
```

```
00001 1
00002 2
00003 3
00004 5
00005 5
00006 5
```

00007 5
 00008 5
 00009 5
 00010 5
 00011 5
 00012 5
 00013 5
 00014 4
 00015 5
 00016 5
 00017 6

.
 (remaining serial-numbers: aggregation-number 6)

.
 00245 6

SAVE, TAPE1=C81A15B

According to the previous example, the lists will be grouped together in the following way:

List-numbers	Aggregation-group
101.....	1
106.....	2
111.....	3
156.....	4
116+121+123+126+ 131+136+141+143+146+151+161+166.....	5
171+172+173+201 to 240+301 to 392+401 to 430	
501 to 540+601 to 699+701 to 785+801 to 838.....	6

On the output-file, the aggregation-groups will be written in ascending number-order.

TAPE2=C81A10B

A standard input data-file. It reads corresponding serial and list-numbers. See section 8.6.

TAPE3=C81A01B

A standard input data-file. It reads summary results from local elections.

TAPE4=C81A04B

A standard input data-file. It reads results from individual lists put up at the local elections.

8.3. OUTPUT-FILESTAPE5

An output data-file. A version of local elections is written on TAPE5 as a FORTRAN character-formatted file. Its form depends on TAPE1 and a number of program-instructions. See section 8.7.

TAPE20

An output data-file. TAPE20 contains a short transcript of TAPE5 and is copied on the print output-file by COPYSEF, TAPE20.

8.4. MODIFY INSTRUCTIONS

The program 'KOMVALG' is stored as a MODIFY source deck, where OPL=U99E01A. MODIFY is called in order to create a version of program 'KOMVALG' on file COMPILE for later compilation and execution.

GET,U99E01A. (MODIFY program library on indirect file U99E01A)
 MODIFY,P=U99E01A,U. (MODIFY writes a version of program library
 on COMPILE file)

-EOR-

*DECK KOMVALG

Only deck KOMVALG is written on COMPILE file. Required.

*IDENT KONTROL

All modifications are identified by linename KONTROL. Optional.

*INSERT 24

INTEGER VUA(8,X),VUB(8,X),VUC(8,X),VUD(8,X)

X equals number of list-aggregation. X is identical to the highest list-aggregation number on TAPE1. Required.

*INSERT 25

GRPANT=X

X equals X in the former program-instruction. Required.

*INSERT 26

SPLIT=YY

By this instruction, the user can determine what local elections shall be written on TAPE5. YY=70, only the local elections in 1970 will be written on TAPE5. YY=74, only the local elections in 1974 will be written on TAPE5. YY=78, only the local elections in 1978 will be written on TAPE5. YY=81, only the local elections in 1981 will be written on TAPE5. YY=0, all elections will be written on TAPE5. Default value: 0. Optional.

*INSERT 27

KONTROL=Z

If Z equals 1 a control-transcript of TAPE5 will be written on TAPE20. If Z equals 0, no transcript will be written. Default value: 1. Optional.

*INSERT 28

REWIND=Z

If Z equals 1, all input- and output-files are rewound after use.

If Z equals 0, input- and output-files are not rewound. Default value: 1. Optional.

*DELETE 363

1 FORMAT (XXX)

XXX is format specification for output-file TAPE5 containing information for all local elections. Consequently, it is assumed that SPLIT is set to its default value: 0. See section 8.7. Conditional, i.e. if SPLIT is set to 0.

*DELETE 540

1 FORMAT (YYY)

YYY is format specification for output-file TAPE5 containing information for local elections in 1970, or 1974, or 1978, or 1981. Consequently, it is assumed that SPLIT is set to 70, or 74, or 78, or 81.

See section 8.7. Conditional, i.e. if SPLIT is set to 70, or 74, or 78, or 81.

8.5. BATCH-JOB EXAMPLE

In the following example, a standard-version of local elections in 1981 is created for later insertion in data-archive. It is assumed that TAPE1 is made in a correct way having 22 different list-aggregation groups. All input- and output-files are available as direct or indirect files on mass storage. The job is submitted from a terminal:

/JOB

8.7. VARIABLES ON TAPE5

The variables on output-file TAPE5 from program 'KOMVALG' can be divided into three parts:

- a) information concerning the various commune-units will always be written on TAPE5. The variables in question are required.
- b) Summary information concerning each local election plus at least 1 list aggregation group are written on TAPE5 depending on the value of SPLIT. The variables are conditional.
- c) Information for more than 1 list aggregation is optional, i.e. determined by the user. In the following variable list, it is assumed that the user defined 6 list-aggregation groups on TAPE1.

SERIAL NUMBER indicates relative positions of variables depending on the value of SPLIT.

TYPE/MIN tells, how the variables must be defined in FORTRAN format. 'l6' indicates an integer variable of at least a 6 characters length. 'Rl0' means an alphanumeric variable right position of at least a 10 characters length. If a variable for a given unit fills more characters than defined on the format statement, one or more asteriks will be written on TAPE5. If a variable has less characters for a given unit than defined on the format statement, the variable in question will be filled by a number of leading blank characters on TAPE5.

STATUS indicates under what conditions the variable in question will be written on TAPE5. R=required. C=conditional. 0=optional.
